SAVE TIME

One Purchase Order. One Click.

End the hassle of multiple purchase orders in various formats. With SureCost Purchase Manager™, generate one purchase order worksheet for all items and vendors. Submit to all vendors simultaneously with just one click. Plus, you can both procure all products and initiate returns with your primary vendors from a single platform.

SureCost also helps you navigate challenging purchasing situations. By seeing real-time product availability from most wholesalers and distributors, easily move an item or source to prevent out-of-stocks while capturing the reason and impact on your cost of goods sold. When vendor minimums aren't met, small POs can be combined or deferred to a later date.

VENDOR INTELLIGENCE

No More Price Shopping

View all purchasing options in one place

For each item you add to your purchase order worksheet, SureCost provides a **consolidated view of all purchasing options within a product group**. The product group contains equivalent products, but you have the capability to customize the group by separating brands, package sizes, unit of use and unit dose based on your needs.

350+ vendors, one view. Primary, secondary, tertiary, direct-from-manufacturer, GPO, 340B and WAC accounts — all compared at the point of purchase. When Drug Shortage Insights™ flags a shortage, alternative NDCs appear in the same view with contract pricing and rebate impact shown side by side.

COMPLIANCE INSIGHTS™

Driving Compliance to Maximize Rebates

Understanding and adhering to primary vendor contracts unlocks savings through maximized rebate programs. SureCost inputs the key components of your contracts — minimum purchase volume, generic compliance ratio (GCR) and other preferences — into your rules and configurations. **Purchase Manager™ then recommends which item aligns with your pharmacy's strategy and goals.**

Costs displayed **factor in rebates** and market-share rebates, so you see your true cost from each source. SureCost alerts you when a vendor's price does not match the GPO or contracted price.

SureCost will also alert you if an item has a **vendor special price** — items that primary vendors and large wholesalers are pushing pharmacies to buy (SOURCESM, Progen, PRxO, OneStop). SureCost categorizes all of them consistently.

Purchase Manager™

One purchase order. One click. 350+ vendors compared at the point of purchase.

DATA-DRIVEN DECISION MAKING

Empower Data-driven Purchasing Decisions

With Primary Vendor Assurance, automated reports and analysis tools help pharmacies monitor and track compliance with primary vendor agreements, ensuring adherence to rebates and financial objectives.

Make data-driven decisions with real-time insights into total purchasing spend, open purchase orders, savings, rebates and vendor spend across all pharmacy locations. If your team decides not to purchase the SureCost-recommended item, they'll indicate a reason why and the solution tracks this, giving full visibility into the impact on your cost of goods sold.

Receive the Right Items, Right Quantities, Right Prices

After submitting your purchase order worksheets, SureCost will track and alert you at every step of the purchasing process, from submitting your order to receiving the items.

No need to check against a packing list to marry invoices and send to accounting later. Scanning with the SureCost mobile app enables you to receive items anytime, anywhere. SureCost will flag product/price/quantity discrepancies and allow you to reconcile them with the same solution. Even if your primary vendor offers a receiving system, with SureCost, you won't have to receive secondary vendor items separately.

HIDDEN SAVINGS

Find Hidden Savings With SureCost

SureCost provides a list of items on an open PO worksheet where you can find savings. Here are a few reasons why an item would be on this list:

You prefer to purchase products at a size that fits your monthly volume.

You use automated dispensing technology where you need consistency of product.

Although buying from the top 200 generics helps meet primary vendor compliance, it may be more cost-effective to purchase outside of the top 200.

Patient may prefer a specific NDC, but it is not the lowest cost in that product group.

Secondary vendors may be offering substantial savings for an item.

A shortage-predicted NDC can be substituted proactively at a contract-compliant price — before supply constraints drive costs up.

Hidden Savings

Real-time insights. Full purchasing visibility. Every location.

“We needed to know if the switch was worthwhile, so we did an analysis. It turned out SureCost was saving us over \$200,000 a year. And it’s probably closer to \$300,000 now.”

Nic Smith, Founder and Owner, Smith Pharmacy

SMART SUPPLY™ ADVANTAGE

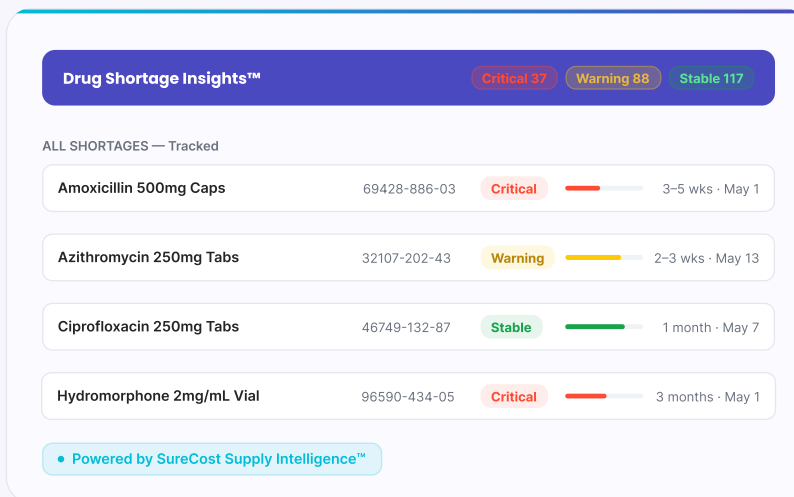

Drug Shortage Insights™ + Purchase Manager™

Most procurement tools react to shortages after they’ve disrupted supply and driven up costs. Smart Supply™ acts before they do:

- Daily shortage predictions with confidence scoring surface contract-aligned NDC alternatives before you run out
- Shortage-duration forecasting helps decide whether to stockpile, substitute wait using data (not guesswork)
- Shortage-alternative NDCs are validated against GPO and primary vendor contract terms at the point of order
- Rebate-tier impact of any substitution shown before you commit; no surprise compliance drift

Intelligence without action is just reporting. Smart Supply™ connects shortage signal → vendor availability → cost validation → contract alignment → purchase action in one workflow.

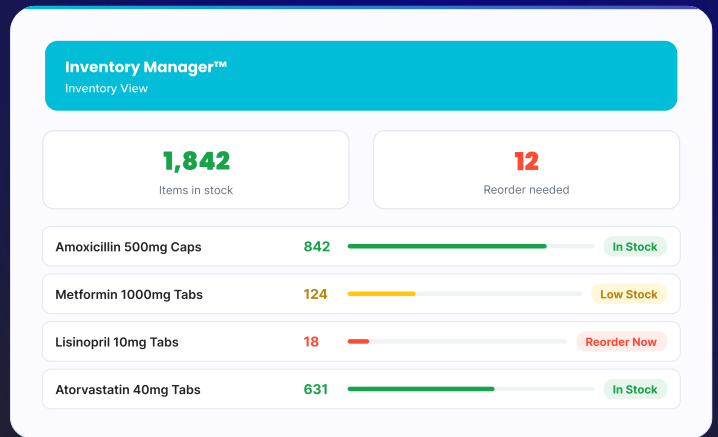

Based on conservative average monthly and annual savings of current SureCost retail customers. Exact savings will vary per customer.

SMART SUPPLY™ MODULE

Inventory Manager™

System-wide Inventory Control. Perpetually Accurate. Always Automatic.

SYSTEM-WIDE INVENTORY CONTROL

Perpetually Accurate. Always Automatic.

SureCost Inventory Manager™ oversees both physical and perpetual inventory, transfers and returns, enabling standardization of items across all pharmacies and quicker responsiveness to changes in stock levels.

Thanks to seamless integration with your pharmacy management system, Inventory Manager™ enables you to order a curated list of items aligned with your dispensing trends. This ensures heightened accuracy in both inventory levels and purchase orders.

Automatically update your on-hand count and send your pharmacy management system an acknowledgment of what you received in real time.

10–20% reduction in inventory costs stemming from better forecasting of on-hand quantities and elimination of excess inventory. When connected to Drug Shortage Insights™, shortage signals further sharpen those forecasts, so teams adjust par levels before a shortage is declared, not after.

AUTOMATE REPLENISHMENT

Automate Replenishment Orders

Generate daily or just-in-time, data-driven orders by considering purchasing and usage volumes and inventory levels. By having the right inventory at the right time, pharmacies save several hours per week while reducing out-of-stocks.

Pharmacies save an average of 50% of time spent on purchasing and inventory management with SureCost. On average, pharmacies spend 2–3 hours daily on these tasks. With SureCost, pharmacies now spend only 1–1.5 hours.

SHORTAGE-DRIVEN INVENTORY

Predictive Inventory Planning

Inventory Manager™ connects to Drug Shortage Insights™ so shortage predictions automatically inform inventory planning:

- Par levels adjust automatically as shortage risk increases
- SKU-level shortage-impact visibility prioritizes which items require proactive stocking
- Primary vendor and rebate-tier modeling ensures shortage-driven changes don't sacrifice contract compliance
- Workflow automation across facilities reduces manual intervention during shortage events

TRANSFER MANAGEMENT

Proactively Resolve Inventory Shortages

Initiate transfer of stale or slow-moving products to other departments or pharmacy locations, entirely automatically. Automatically receive alerts for negative on-hand quantities and unfilled, unreceived and shorted transfers.

During shortage events, automated transfer visibility ensures shortage-driven redistribution between inpatient, outpatient and specialty sites is tracked while verifying DSCSA data through the same platform.

MOBILE APP

Receive Anytime, Anywhere

Manage inventory from wherever you want, whenever you like, with the SureCost mobile app. Add items to open purchase order worksheets on the floor or from a remote location. Do quick cycle counts without a laptop and cart. Easily request, receive and fill transfers.

Mobile receiving captures DSCSA barcode data at the same time, including for shortage-alternative NDC purchases.

“When I was a pharmacy technician, it took one to four hours on a good day to complete cycle counts. Once we implemented SureCost’s perpetual inventory management, our counts were easily and accurately up to date. This cut down the time to 30 minutes for my cycle counts and, in 15 minutes, I would confirm my order is up-to-date and submit it.”

Gabriel Toribio, Central Purchasing Manager at PharMerica

Mobile App

Manage purchasing and inventory anytime, anywhere.

DSCSA COMPLIANCE

Achieve and Maintain DSCSA Compliance With SureCost

SureCost Smart Supply™ empowers pharmacies to stay consistently DSCSA-compliant by streamlining receiving and capturing of DSCSA data. As pharmacies use the mobile app to scan the 2D barcode to receive their items, they are simultaneously capturing all of the DSCSA-mandated data.

When Drug Shortage Insights™ identifies an alternative NDC and Purchase Manager™ executes the purchase, DSCSA traceability data is captured automatically at receiving — through the same interface, the same workflow, with no manual handoff between systems.

No more swivel-chair compliance. DSCSA Compliance Packages are embedded directly in the Smart Supply™ workflow — so every purchase, including shortage alternatives, is automatically traced and documented.

WHAT'S COVERED

DSCSA Compliance Packages

- EPCIS v1.2+ data retrieval for all compliant vendors
- Rolling 6-year retention of DSCSA barcode data captured at receiving
- Reconcile DSCSA receiving data with vendor EPCIS “T2” transaction data
- Quarantine and track non-compliant traceable items for vendor accountability
- Support returns for traceable items with the SureCost mobile app
- Scan and capture DSCSA barcode data on all inventory transfers
- Capture GTIN-14, lot numbers, expiration dates and serial numbers on all inbound and outbound transfers

Packages Available:

- Traceable Receiving Pack: \$29/pharmacy/month
- Traceable Transfers Pack: \$29/pharmacy/month
- Traceable Receiving and Transfers Bundle: \$49/pharmacy/month (Save 15%)

Work Smarter. Save More. Stay Compliant.

SureCost Smart Supply™ is the only platform connecting shortage signal → vendor availability → cost validation → contract alignment → purchase action in a single workflow.

What You Get With Smart Supply™:

- Harness an all-in-one platform for purchasing, inventory management and shortage intelligence
- Remove backtracking and paper chasing thanks to best-in-class automation
- Gain a holistic view of your pharmacy's purchasing, inventory and shortage exposure
- Integrate with your pharmacy management system, accounts payable, ERP and DSCSA compliance systems
- Use the SureCost mobile app to manage purchasing and inventory anytime, anywhere
- Predict shortages, not just react, with Drug Shortage Insights™ keeping your formulary intact
